

Project Atlas

Synthetic data-center demonstration | IC working draft

V2 - Proceed with conditions

Investment readiness: 77/100 Evidence confidence: 69%

120 MW planned capacity. 90 MW conditionally allocated. Remaining capacity requires an executed utility agreement.

Conditions for committee review

1. Secure the remaining power.
2. Convert tenant LOIs into executed leases.
3. Validate delivery commitments and the critical path.

Evidence and methodology

This sample reflects the publicly demonstrated Atlas screening under provisional Ruleset 0.1. Analysts enter assumptions and review sources manually. Deterministic code calculates scores and builds the IC working draft.

Scope of this sample

All Atlas evidence is synthetic. This illustrative sample is assembled from the public demonstration; it is not an export of a completed client engagement, a signed underwriting opinion, or a Quality of Earnings report. It does not demonstrate automated document analysis or historical-cohort validation.
